# AI EXPLAINED

AI is a technology trend  
referencing any  
development to automate  
or optimize tasks that  
traditionally have required  
human intelligence.

Silvie Spreeuwenberg  
AIX

# AI HYPE

Startups in AI raise more money.

Everyone will interact daily with AI-based within next decade.

Gartner Hype Cycle for emerging technologies 2018

# WHAT AI BRINGS TO FINANCE ?

Real time transaction monitoring to detect fraud by data analysis of past transactions, expert knowledge and machine learning.

It is not acceptable to close an account based on the risk score of a model that we don't understand.

Libert  
Copyright Libert 2019

# AI FAILS

Google's algorithm that was trained to help them selecting new hires turned out to be highly gender biased towards man.

**POOR DATA**  
**BIASED DATA**  
**MISSING FEATURES**  
**MISSING SITUATIONS**

**Only 52%**  
of graduates get  
graduate-level jobs,  
CIPD reveals

# HUMAN DECISION MAKING

"Nobody would say,  
'I'm voting for this guy  
because he's got  
the stronger chin,'  
but that, in fact, is  
partly what happens."

Psychologist  
Kahneman,  
Nobel prize 2002

"Should I  
marry Ann?"

\_David

"NO!"

\_Oracle

Why XAI is important?

## 5 REASONS

It will be required

Better ROI

More trusted

Enhanced decision making

It is feasible

Libert

Copyright LIBERT 2019

1

**Society is demanding transparency**

**People have ethical concerns**

**Governments prepare legislation demanding explanations**

**AI technology can be used for the good and the bad.**

... it can fake images, fake videos and make fake news.

... it can detect lies and guide people to make better decisions by using large amounts of data.

**3 fundamental rights of democracy are threatened:**

1.  
**Freedom of choice**
2.  
**Access to information**
3.  
**Equality of opportunity**

European Commission  
Report on trustworthy AI  
July, 2019

Suggested readings and echoed or homogenized shared opinions provide us with a tunneled view based on our own patterns.

Libert  
Copyright LIBERT 2019

2

**Systems that explain themselves  
have a better ROI**

**Explanations make  
a solution easier adaptable  
to changes**

**Explanations increase  
the success rate of  
AI solutions**

Integrated in the value creation life cycle of your business means to adopt timely when your policy, customers or environment changes.

libert  
Copyright LEART 2019

3

**Your business will be more trusted**

**Make more credible decisions**

**Being a responsible business**

The financial sector is commonly held to a higher standard as trust is essential for the system.

When it comes to AI, strong operational controls could be more important than capital and liquidity buffers.

**De Nederlandse Bank  
report on AI  
in financial sector 2019**

thart

3

### Explanations enhance decision making

**Unwanted decision biases  
come to the surface**

**Missing commonsense  
knowledge is detected**

AI model presented with  
a foil makes the wrong  
decision.

When it sees 'baby on  
blanket', it concluded  
'animal in wild nature'.

## 5

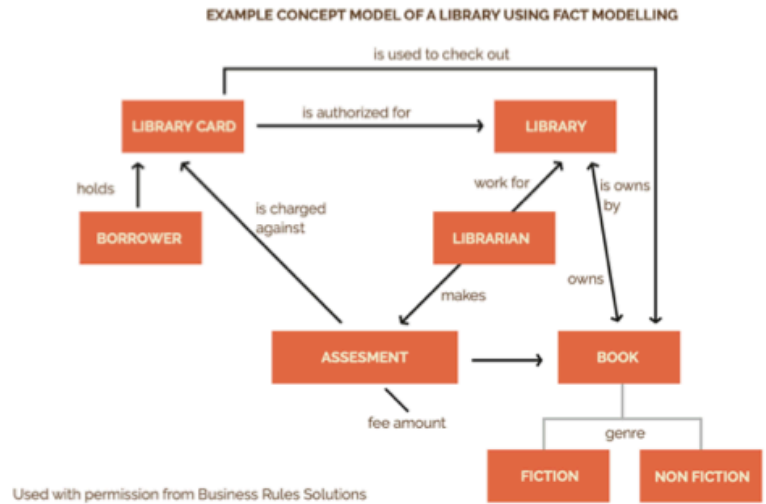

Explainable AI is feasible  
using a six-step approach

1. Get a shared understanding of the domain
2. Understand the task and select the right scope
3. Collect the right data and improve its quality
4. Select AI technology that deliver results
5. Generate good explanations
6. Evolve the system over time

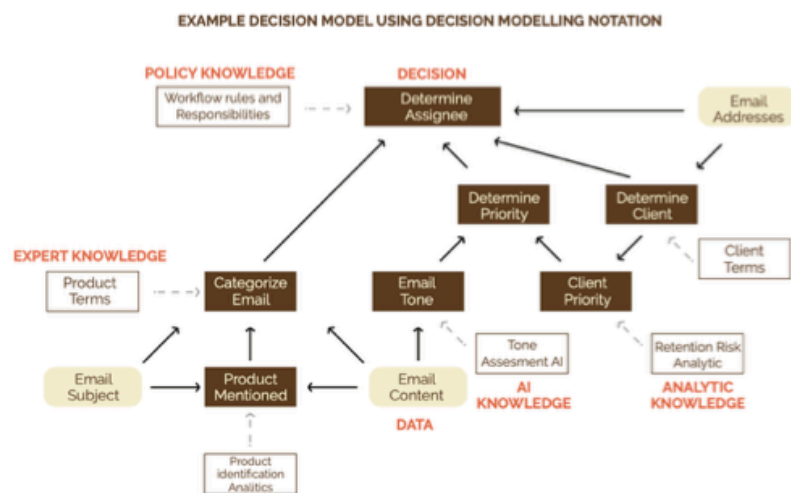

Perhaps your organization is working on an enterprise ontology or data dictionary?

These are good initiatives to align terminology between departments. Hopefully your business stakeholders are involved!

Break-up the question into potential influencers and phrase them as a testable hypothesis.

Test them using basic statistical analysis on the available data and create a root-cause analysis.

XAI combines  
the technology of  
the three AI waves

**Clinicians find it more important that the system help them to justify their clinical decision.**

S. Tonekaboni et al,  
Contextualizing Explainable  
Machine Learning for Clinical  
End Use, 2019

MACHINE LEARNED MODEL

EXPLANATION MODEL

INTERACTION MODEL

Accuracy, robustness and precision are not the way to convince a domain expert.

Instead we need to develop separate models to support communication of an explanation in a context

EXPLANATION MODEL

Be aligned with the user's beliefs.

Indicate what relevant data is used.

Indicate when the model is not applicable.

Be transparent and follow common sense logic

INTERACTION MODEL

An explanation does not  
need to be complete

## RESEARCH ON XAI

DARPA  
Allen Institute for AI

Explainability, next  
to accuracy and  
precision, is one of the  
optimizations criteria in  
the model.

Improve techniques  
that learn explainable  
models such as  
Bayesian networks.

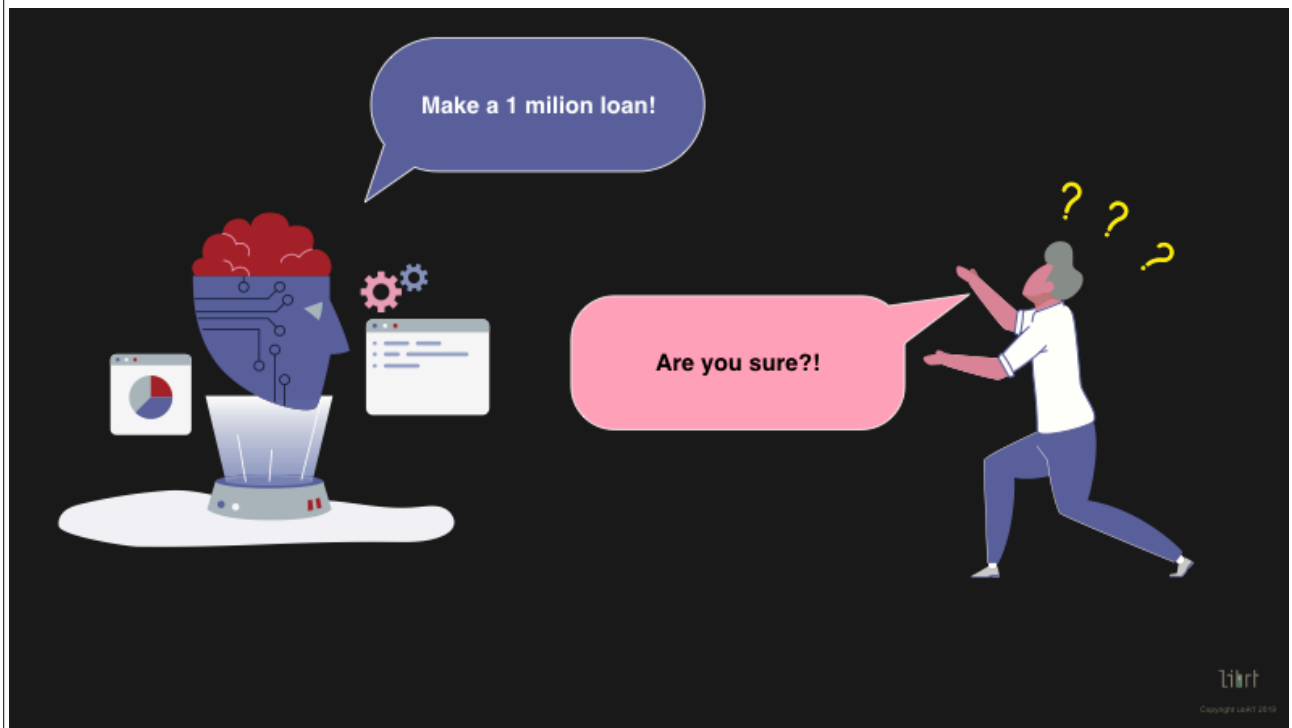

Understand how to  
use techniques to  
generate explanations,  
such as decision tree  
generation, from black  
box models.

liart

# ARE WE FIT?

How to measure the explainability of a model?

How to incorporate common knowledge in machine learned models?

How to present an explanation as a meaningful conversation?

Green line represents an overfitted model
